

# PORTFOLIO WEBSITE SCOPE DOCUMENT

Website UI, Content & Functional Requirements

## 1. Project Overview

This document defines the requested changes and functional scope for the portfolio website. The objective is to simplify navigation, present services and projects in a clean professional layout, streamline the contact/hiring experience, and ensure client enquiries are delivered by email.

## 2. Navigation & Navbar

- Remove the “Select Theme” button from the navbar permanently.
- Add a “Services” option to the navbar.
- Keep the navigation clean and focused on the main portfolio sections.

## 3. Services Section

- Create six service cards arranged in three columns per row: Web Development, Mobile App Development, AI Solutions, API Development, Cloud Deployment, and UI/UX Design.
- Use polished cards with strong visual hierarchy and tasteful animations while keeping the section professional and responsive.

## 4. Projects Section

- Display projects in a four-column grid on larger screens.
- Keep project cards aligned consistently in one row where screen width allows.
- Make the grid responsive on tablet and mobile.

## 5. Experience Section

- Remove verified certifications content.
- Remove education background content.
- Remove endorsements content.
- Keep the remaining Experience section focused and uncluttered.

## 6. Contact / Hire Me Form

- Remove the phone number from the Contact section.
- Place the contact form on the right side of the Contact section.
- Use one shared contact form for both “Hire Me” and “Select Service” actions.
- Include a Service dropdown listing all six services.
- Collect the client’s name and email and/or phone/contact number.
- Collect project description/details, Budget, USP (unique selling point/requirements), and Timeline.
- Send submitted enquiry details to farhanarshad15926@gmail.com.

## 7. Form Behaviour

- Clicking “Hire Me” opens the shared contact form.
- Clicking a service/select-service action opens the same shared form.

- Use clear responsive fields and validation for required inputs.
- Show a clear success confirmation after successful submission.

## 8. Footer

- Add GitHub and LinkedIn links.
- Remove the phone number.
- Keep the footer minimal and professional.

## 9. UI / UX Requirements

- Modern, professional portfolio design.
- Consistent spacing, typography, card sizing, buttons, and section alignment.
- Smooth, tasteful animations without excessive effects.
- Responsive across desktop, tablet, and mobile.
- Readable labels and appropriate contrast.
- One primary enquiry flow rather than duplicate contact forms.

## 10. Email / Enquiry Requirement

- All submitted enquiry information should be routed to farhanarshad15926@gmail.com, including selected service, name, contact details, project description, budget, USP/requirements, and timeline.

## 11. Deliverables

- Updated navbar.
- Six-service responsive Services section.
- Four-column responsive Projects layout.
- Simplified Experience section.
- Single reusable Contact/Hire Me form.
- Six-service dropdown and client enquiry fields.
- Email delivery of submitted enquiries.
- Updated footer with GitHub and LinkedIn links and no phone number.
- Responsive UI with polished animations.

## 12. Acceptance Criteria

- Theme selection button is no longer visible in the navbar.
- Services appears in the navbar and links to the Services section.
- Exactly six requested services are displayed in a 3-column layout on desktop.
- Projects use a 4-column desktop layout and remain responsive.
- Certifications, education background, and endorsements are removed from Experience.
- Phone number is removed from Contact and Footer.
- Hire Me and service selection use the same contact form.
- The service dropdown contains all six services.
- The form captures the required client/project information.
- A submitted enquiry is delivered to farhanarshad15926@gmail.com.

- GitHub and LinkedIn links are present in the footer.
- The final website works correctly on desktop and mobile.

## **13. Notes**

- This scope is a cleaned and structured version of the handwritten requirements provided. Exact colors, animation style, spacing, and typography can be finalized during implementation while keeping the functional requirements unchanged.
